WE ARE EXPANDING AND MOVING...!

A lot of positive things have affected EFSEN over the last years. We are seeing growth in sales on our distribution products as well as in our own solutions. We have increased our competencies to also include an optics/software developer in Agge Winther as well as we now have a leading UV LED chemist in David Ivarsson as our application engineer supporting the transformation from UV to UV LED in various applications.

We have developed the ICAD™ Technology, and it is gaining a lot of interest from multiple industries and we are now supported by the Danish Technology Fund - Markedsmodningsfonden to develop this technology globally over the next 2 years as it is recognized to be a key to better UV process control as well as ideal for implementation of Industry 4.0.

Our W-LED with ICAD™ Inside together with WoodCure inside is now fully equipping new production lines in the wood industry. W-LED is optimal for retrofitting and hence is also easy to integrate into new lines. The latest is a pigmented line running 50m/min with only one W-LED per coating station.

P-LED also with ICAD™ Inside is opening new areas for Efsen in the Graphic arts and Display industry. ICAD™ is the way to inline monitor the UV output on the whole width of the web and also works during production runs, whereas it increases uptime and process parameter certainty.

Also our relatively new distributorship with Vela Technologies has increased the activity in the medical device market throughout Europe, due to the unique 3D Curing Technology offered by Vela. We are looking forward to being able to offer better testing facilities for this technology at Efsen.

All this requires us to move to larger facilities still in the neighborhood north of Copenhagen. The new facilities will give us the possibility for multiple customer tests at Efsen, we will be able to offer training sessions and seminars at Efsen, as well as giving us space for more colleagues.

From May 15th, our address will be:

Efsen UV & EB Technology
Skovlytoften 33
2840 Holte
Denmark

Phone, Fax, Email and website remains the same.

We will send a reminder about this May 7th for you to change data in your recordings.

You are always welcome to Efsen, we look forward to hosting you in this new atmosphere.

On behalf of the whole Efsen Team.

Thomas Efsen
Managing Director
